

Case 258 : Narrative

Case Vehicle (A): 2000 Dodge	Vehicle (B): 1999 Peterbilt
Type: Durango SLT, 4-door 4x4	Type: Tractor-trailer
Driver: 31-year-old female	Driver: 44-year-old male
CDC: 12-FDEW-3	CDC: 99-0000-0

SITUATION

[1](#) [2](#) On a snowy day, case vehicle (A) was traveling north at an unknown speed in the left-northbound lane of a four-lane asphalt road in an urban area, and was approaching an intersection with the exit ramp of a two-lane, limited-access highway. The road surface was snow-covered, it was daylight, and snowing, and the speed limit was 50 mph (80 kph). The intersection is equipped with a four-way traffic light. Vehicle (B), a tractor-trailer, was traveling west at an unknown speed in the left-turn lane of the exit ramp. As vehicle (B) approached the intersecting road, the driver applied the brakes, but vehicle (B) slid on the snow-covered road. As vehicle (B) entered the northbound lanes, the driver of case vehicle (A) applied the brakes, but was unable to keep the front of case vehicle (A) from striking the left side of the vehicle (B)'s trailer. Case vehicle (A) was towed from the crash scene, and the driver was transported to a local hospital with police reported "B" injuries. Vehicle (B) was driveable, and according to the police the report, the driver did not sustain any injuries.

GENERAL VEHICLE DAMAGE AND ESTIMATED CRASH SEVERITIES

[3](#) [4](#) The direct damage to the front of case vehicle (A) began at the left-front bumper corner and extended 160 cm across the entire front of the vehicle. [5](#) The maximum crush was 57 cm to the left side of the front bumper.

[6](#) [7](#) [8](#) [9](#) [10](#) Using the WinSMASH accident-reconstruction program and measurements for case vehicle (A), the following impact severity was calculated for the frontal impact with vehicle (B):

		Calculated Velocity Change - kph (mph)		
Vehicle	Variable	Total	Longitudinal	Latitudinal
Case Vehicle (A)	EBS	47 (29)	-45 (-28)	-12 (-8)

DESCRIPTION OF DAMAGE TO CASE VEHICLE (A)

Exterior

[11](#) The damaged front-bumper cover was separated from the reinforcement bar, which was crushed. [12](#) The grille was damaged, and both headlight assemblies were broken. The hood was crushed and pushed rearward, and the hood latch was damaged and jammed. [13](#) [14](#) Both hood hinges were deformed, but not separated, allowing the rear edge of the hood to elevate, but it did not contact the damaged windshield. [15](#) [16](#) The left-lower corner and right-lower portion of the windshield were cracked due to the cowl being pushed rearward into the windshield glass. [17](#) Both sides of the roof were buckled from the severe frontal impact.

[18](#) On the left side, the front fender was crushed and shifted slightly to the left. [19](#) The left wheel and axle were damaged and the wheel was pushed rearward, shortening the left wheelbase by 21 cm. [20](#) Both left-side doors were deformed and jammed closed, and the left-rear door was removed in order to extricate the driver. During the extrication, the upper and lower portions of the left B-pillars were cut, therefore it is unknown if they were damaged during the crash. [21](#) [22](#) The lower portion of the left A-pillar was deformed, and both left side-door windows were broken.

[23](#) [24](#) On the right side, the front fender was deformed and slightly shifted to the left. There was no damage to the right wheels and no change in the right wheelbase. [25](#) There was no damage to the upper or lower portions of the A-, B-, C- or D-pillars, and both doors were operational. [26](#) There was no other damage to the right side of case vehicle (A).

[27](#) There was no damage to the rear of case vehicle (A).

Interior

[28](#) [29](#) This vehicle is equipped with steering-wheel and passenger frontal-impact airbags, which deployed during the frontal impact. [30](#) There were no facial makeup transfers on the driver airbag, but there was blood on the upper portion of the airbag skin. [31](#) [32](#) There was no damage to the steering-wheel rim and no rotation of the steering column. [33](#) There was no damage to the upper and mid portions of the instrument panel. [34](#) [35](#) The left and right portions of the knee bolster were damaged from driver contact. Also, the fan knob on the center portion of the instrument panel was broken off from driver contact. [36](#) [37](#) There was no other damage to the center portion of the instrument panel or glove compartment area. [38](#) The gas pedal and toe pan in the driver area were deformed and intruded, respectively. The roof structure, roof headlining, and roof siderail were deformed in the driver area. [39](#) [40](#) [41](#) There was no evidence of occupant contact with the roof, windshield, and header areas. The driver-door window glass was broken. Because the left-rear door was removed during extrication, it is unknown if the window glass was broken during the crash sequence. [42](#) [43](#) The following intrusion was noted and measured.

Location	Component	Distance (cm)	Direction
driver	toe pan	roof	9

OCCUPANT KINEMATICS AND INJURIES

[44](#) The 5-ft, 5-in, 144-lb, 31-year-old female driver was wearing the three-point belt, and the steering-wheel airbag deployed. [45](#) [46](#) [47](#) [48](#) The fact that the shoulder-belt webbing was cut indicates that the driver was wearing the belt restraint. The shoulder-belt anchor point was adjusted to a mid-height position on the B-pillar, and the driver reportedly had the seat adjusted to a mid-track seating position and the tilt-steering in a low-position. She apparently applied brakes with her right foot just before the crash.

During the frontal impact, she moved forward and to the right relative to the vehicle interior, into the belt restraints and airbag. [49](#) [50](#) She sustained a concussion with a loss of consciousness, possibly from contact by the airbag. She sustained a fractured nose, probably from contact by the airbag. She sustained a 13-cm laceration to the left side of her head above the left ear from contact with an unknown interior surface. [51](#) She sustained a contusion to the posterior area of her right forearm and right wrist, probably from contact with the fan knob on the center portion of the instrument panel, as evidenced by the fan knob being broken. [52](#) [53](#) In addition, she sustained a laceration and a contusion to the left knee from contact with the left portion of the knee bolster, as evidenced by a 10-cm by 4-cm scuff mark on the left portion of the bolster. [54](#) [55](#) She also sustained a contusion to the right knee from contact with the knee bolster, as evidenced by an 8-cm by 3-cm scuff mark on the right portion of the bolster. [56](#) She also sustained a sprain to the left ankle, probably from contact with the toepan.

The following table [57](#) and attached drawing summarizes the injuries for the restrained driver.

Occupant: Driver	Age: 31 years	Gender: Female		
Restraints: 3-point belt worn; airbag deployed	Stature: 165 cm (5 ft, 5 in)	Mass: 65 kg (144 lb)		
Injury Description	A.I.S.	Injury Source		
—	—	Definite	Probable	Possible
Concussion, with loss of consciousness	2	—	—	Airbag
13-cm laceration, left side of head above the left ear	1	Unknown interiorsurface	—	—
Fracture, nose	1	—	Airbag	—
Contusion, posterior area of right forearm	1	—	Fan knob on center portion of dash/center IP	—
Contusion, posterior area of right wrist	1	—	Fan knob on center portion of dash/center IP	—
Laceration and contusion, left knee	1	Knee bolster	—	—
Contusion, right knee	1	Knee bolster	—	—
Sprain, left ankle	1	—	Toe pan	—
Maximum A.I.S. Level	2	—	—	—
Injury Severity Score	6	—	—	—

CASE NO.: 258-01

CASE VEHICLE: 2000 Dodge

TYPE: Durango SLT, 4-door 4x4

OCCUPANT: (Driver) 31-year-old female

STATURE: 165 cm (5 ft, 5 in)

MASS: 65 kg (144 lb)

RESTRAINTS: 3-point belt worn; airbag deployed

SEVERITY: MAIS - 2

ISS - 6
